“FLY DIVING” IN AUSTRALIA – JEREMY & AMANDA CUFF

Photographers, photojournalists and Ocean Optics customers Jeremy and Amanda Cuff have published a new PDF feature about “Fly Diving” on the Great Barrier Reef in Australia, which describes in words and images the experiences of diving this unique area in a unique way.

Jeremy said, “Fly Diving is a great way of seeing two aspects of the Great Barrier Reef from one trip and is ideal for divers who for reasons of personal preference, time limitations or cost considerations are unable to do a week long liveaboard itinerary. The feature provides a comprehensive overview of the trip, which we’d recommend for any diver visiting the Cairns area. ”

The “Fly Diving” feature can be viewed and/or downloaded from Jeremy and Amanda’s website at www.ja-universe.com . Go to the “text” section, choose “Australia”. For the PDF version, scroll to the bottom of the page to find the link.

The website features a wide selection of photography and articles with particular emphasis on scuba diving and travel, although other topics such as abstracts and black and white photography are also included.

New work is regularly added to the JA-Universe website in the form of new galleries and articles, and also news items and an image of the month.
